

WHY MASTERTENT® ?

Since 2004, TentCraft has been showing the nation that MasterTent products are truly the world's highest quality portable event tents, designed especially for discerning brand marketers and those that understand the cardinal importance of looking and being their best.

Italian-made MasterTent differentiates itself from other brands by using all aluminum in the connecting elements, the highest quality fabrics, and the thickest aluminum frame in the market.

Our Series 43 is even better than its Series 40 predecessor because of its octagonal leg design, additional frame thickness, and friction-proof setup.

Every MasterTent Series 43 comes with a 5 year warranty, and it will outlook and outlast any other tent in the market.

CORNERS.

The tent roof corners and any points of contact with the aluminum frame are reinforced with PVC components.

ROUNDED OFF.

The flanges on the fasteners are rounded off to prevent scratching when opening and closing the tent frame.

PUSHBUTTON.

The stability and safety of our tent frame is guaranteed by our latch release system. The system facilitates opening and closing the tent. Gentle pressure releases the corner tensioner, allowing the frame to be closed safely.

INTERCONNECTION.

Our connecting components are made of 100% aluminum, strengthening the entire system. The components are attached to the scissor-like profiles by a patented connecting system.

PERFECTLY PROTECTED.

The newly developed rubber covers of the support structure protect the roof during transport, storage, or use.

SECURING THE ROOF.

The patented roof securing hardware fulfills two purposes: it connects the roof to the aluminum frame and ensures that the canopy is situated correctly when opened.

TENSIONER.

A patented system of plastic tensioners is used to ensure that the roof is properly stretched. The advantages are that the fabric is evenly stretched and the printed surfaces are smooth and sharp.

PEAK FLAGS.

Further your brand or product with our peak flags. They stand out in a crowd and are fabricated with the same quality and care of all TentCraft products. Only available on the MASTERTENT® model.

PLASTIC SLIDES.

The ends of the telescopic legs are protected with plastic. The advantages are that there is less friction and the legs of the tent do not get scratched when they are extended.

SEAL.

The valances come with adjustable tensioners to ensure that the tent roof is properly stretched. A perfectly stretched roof ensures that no creases appear on your promotional material and also maximizes drainage.

HOOK AND LOOP FASTENER.

The extra-wide hook-and-loop fastening strips on the inner side of the roof enable the side walls to be attached and removed in seconds. The color of the hook-and-loop fastening strip matches the tent color.

FRAME.

All parts of the aluminum frame are tagged with a clearly visible part number. This makes replacing any worn parts much easier. Simply provide the number printed on the defective component and you will quickly receive a replacement.
