TENT BALLASTING GUIDELINES

CLICK HERE TO LEARN MORE ABOUT WIND RATINGS AND RECCOMENDATIONS.

TentCraft's pop-up tents are easy to set up and take down. We strongly recommend collapsing the tent's frame system at night or when not in use. But when you do need to ballast your tent, here are a few options:

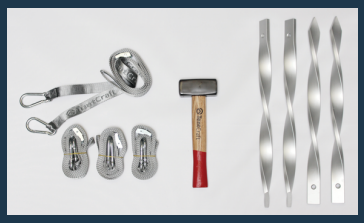

FOOTPLATES (Sold Separately)

Our 53-pound footplates are the best option to use when setting up any of our pop-up tent models in an outdoor, windy environment.

HEAVY-DUTY SPIRAL STAKING KIT (INCLUDED)

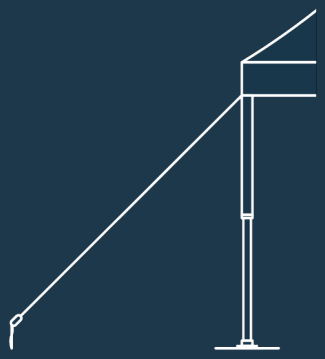

When on grass or other permeable surfaces where staking is permitted and possible, our heavy-duty spiral stakes should be used with the guy straps at a 45-degree angle (in addition to footplates).

STAKE KIT

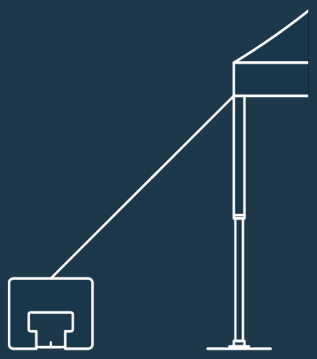

CORNER LOOP

GUY STRAPS & WATER BARRELS (NOT INCLUDED)

Another option, when setting up on pavement, concrete or other hard surfaces are specially designed water barrels (Giffy Water Barells). TentCraft can help you source these or you can contact a local tent rental or ballasting company. The guy straps should be attached at a 45-degree angle.

GUY STRAPS & CEMENT BLOCKS (NOT INCLUDED)

This ballasting method should be used when setting up on pavement, concrete or other hard surfaces where staking is not permitted. You can contact your local ballasting company (rental companies, local concrete companies, barricade companies). The included guy straps should be attached at a 45-degree angle.
